

Micron Technology, Inc. (NASDAQ: MU)

Review & Outlook — FY2026Q4 · 14 weeks · FY2026 53 weeks · First edition

This is third-party analysis based on public information and has not been prepared, reviewed, or approved by Micron or its affiliates.

Author: Jiwon Kim

Issue date: 2026-10-05

Data as of: 2026-10-01 (price) · 2026-09-30 (results)

Information cutoff: 2026-10-04 KST

Completeness: historical actuals, PREREG_A scoring, post-print actuals and RLE

- The pre-registered forecast and post-print estimates remain separate.
- Scenarios are an unweighted range and carry no probabilities.
- Net cash is not adjusted for SCA deposits.

As of the pre-publication confirmation time (2026-10-04T14:42:00+09:00), the author, Jiwon Kim, does not hold shares of Micron Technology, Inc. (MU).

The pre-registered forecast and post-print actuals remain separate, while report-layer estimates are explicitly labelled RLE.

Market data

Metric	Value	Basis
Reference price		\$1,097.39 As of 2026-10-01
Diluted weighted-average shares (FQ4)	1,147M	FY2026 Q4 A-8K
Market capitalization	USD 1,258,706 million	Reference price × FQ4 diluted weighted-average shares
Fiscal year end		2026-09-03 A-8K

Market capitalization is in USD million and equals the reference price times FQ4 diluted weighted-average shares; it is not based on period-end shares outstanding.

Key figures

Metric	Value	Basis
FQ4 revenue		52,860 PREREG_A · USD million
FQ4 revenue		54,229 A-8K · USD million

1. Company overview and reading rules

This section sets out the company overview and the report's information boundaries.

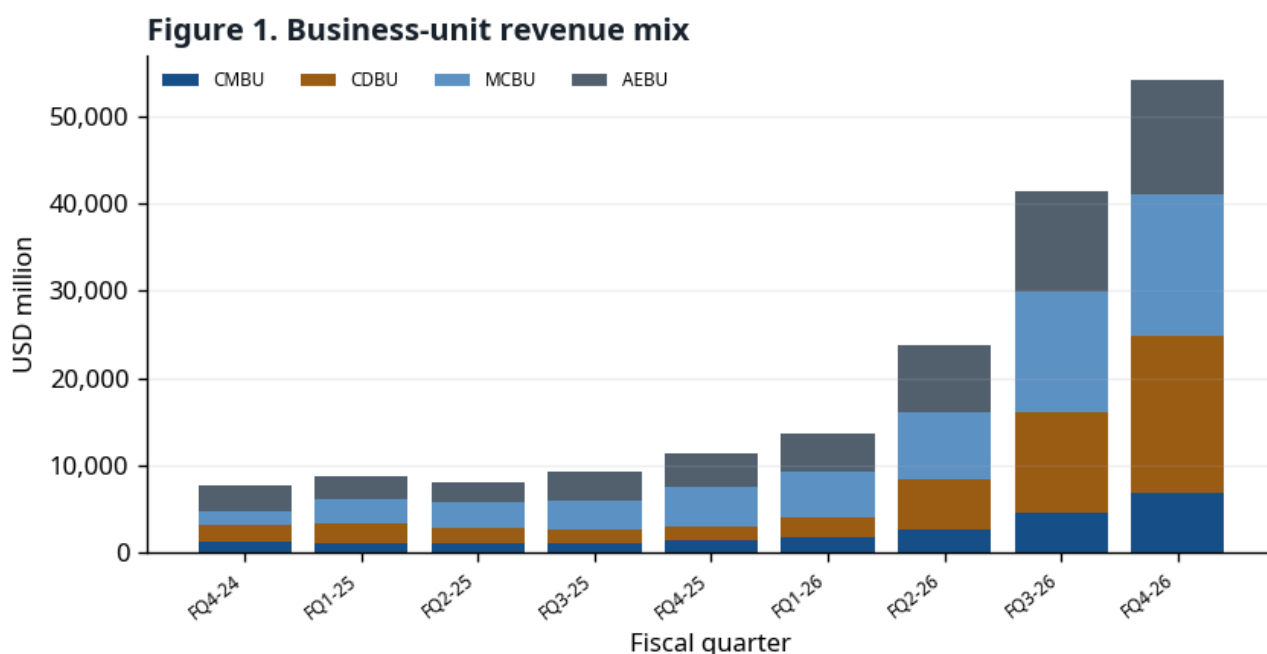

Figure 1. Business-unit revenue mix — USD million · Micron earnings materials [SRC-BU×4, SRC-EX991-FQ4FY26] · 2026-10-04 · GAAP actual (A) business-unit revenue

2. Bull and bear cases

The arguments below are things to monitor, not conclusions. Each one lists what observation would show it to be wrong (falsifier).

Bull case

The company said supply will be tighter in 2027 and 2028 than in 2026.

Management expects industry DRAM and NAND to remain supply constrained in both years and sees no line of sight to balance (REM p.5).

Falsifier: A quarterly script that drops the 'supply constrained' language, or the first quarter in which DRAM price change turns negative.

Source: REM p.5

FQ1 FY27 revenue guidance accelerated on a per-week basis.

The guidance midpoint of \$61,500M is 22.1% per week above FQ4 actual. Management expects sequential revenue growth in every FY27 quarter (REM p.9).

Falsifier: FQ1 FY27 actual revenue below the low end of guidance, \$60,000M.

Source: PR Business Outlook · REM p.9 · SCORED § 8

Strategic customer agreements (SCAs) put a price floor under part of revenue.

Micron has signed 26 SCAs, which it estimates at over 35% of revenue through 2030. 75% of that has a defined pricing framework, mostly bands with floors and ceilings (REM p.3).

Falsifier: A disclosed SCA termination or renegotiation, or a decline in customer deposit balances of \$12,895M.

Source: REM p.3 · PR balance sheet

Bear case

Slower price increases are the company's own statement.

While guiding to higher gross margin after FQ1, management said price increases will be more moderate (REM p.9).

Falsifier: The FQ2 FY27 script reports DRAM price growth above the FQ4 FY26 high-teens percent.

Source: REM p.7, p.9

SCA price ceilings cap upside in a rising market.

Most SCA revenue with a defined framework sits in bands with ceilings; above the ceiling, that revenue does not follow market prices (REM p.3).

Falsifier: The company discloses the share of revenue at the ceiling, and it is small.

Source: REM p.3

Costs and investment are rising fast.

FY27 opex rises by about \$2.5B (REM p.9) and first-half net capex alone is about \$25B (REM p.10). FQ4 GAAP opex ran 77.2% above guidance (SCORED § 4).

Falsifier: FY27 quarterly GAAP opex comes in below the RLE path (\$10,353M).

Source: REM p.9–10 · SCORED § 4

3. Pre-registration versus actuals

The pre-registered forecast and reported actuals are compared on the same basis.

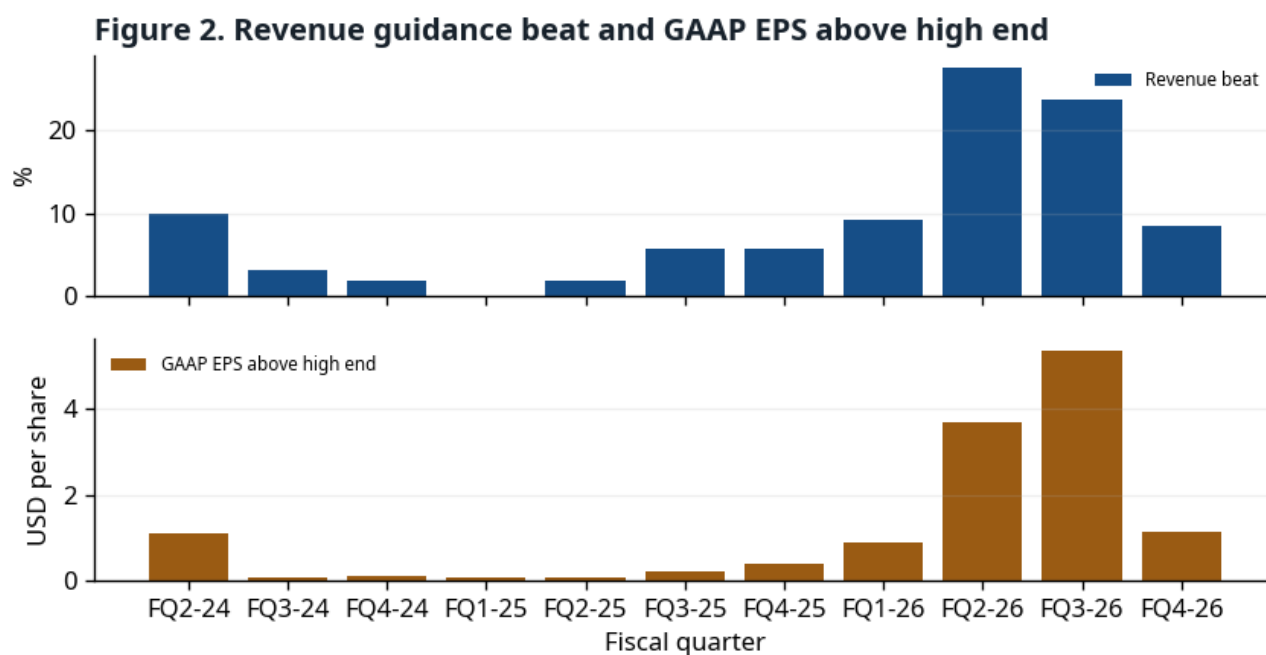

Figure 2. Revenue guidance beat and GAAP EPS above high end — % / USD per share · Micron quarterly guidance and results [SRC-FROZEN, SRC-GUIDANCE×10, SRC-SCORED-FQ4FY26] · 2026-10-04 · GAAP actual and guidance

Quoted SCORED summary

Metric	Actual	Pre-registered base	Error	Absolute percentage error
Revenue	54,229	52,860	1,369	2.5%
GAAP diluted EPS	\$32.87	\$32.57	\$0.30	0.9%
Non-GAAP diluted EPS	\$33.42	\$32.84	\$0.58	1.7%
GAAP operating expenses	3,296	1,860	1,436	43.6%

Guidance labels: 4/4 hit

Band coverage: PASS · 49,000–58,223 · \$29.33–\$36.66

Four-lever GAAP EPS attribution: +\$0.84 / −\$0.73 / +\$0.10 / +\$0.09 = +\$0.30

Next-quarter direction verdict: MISS

4. Outlook

Company guidance and report-layer estimates remain in separate columns.

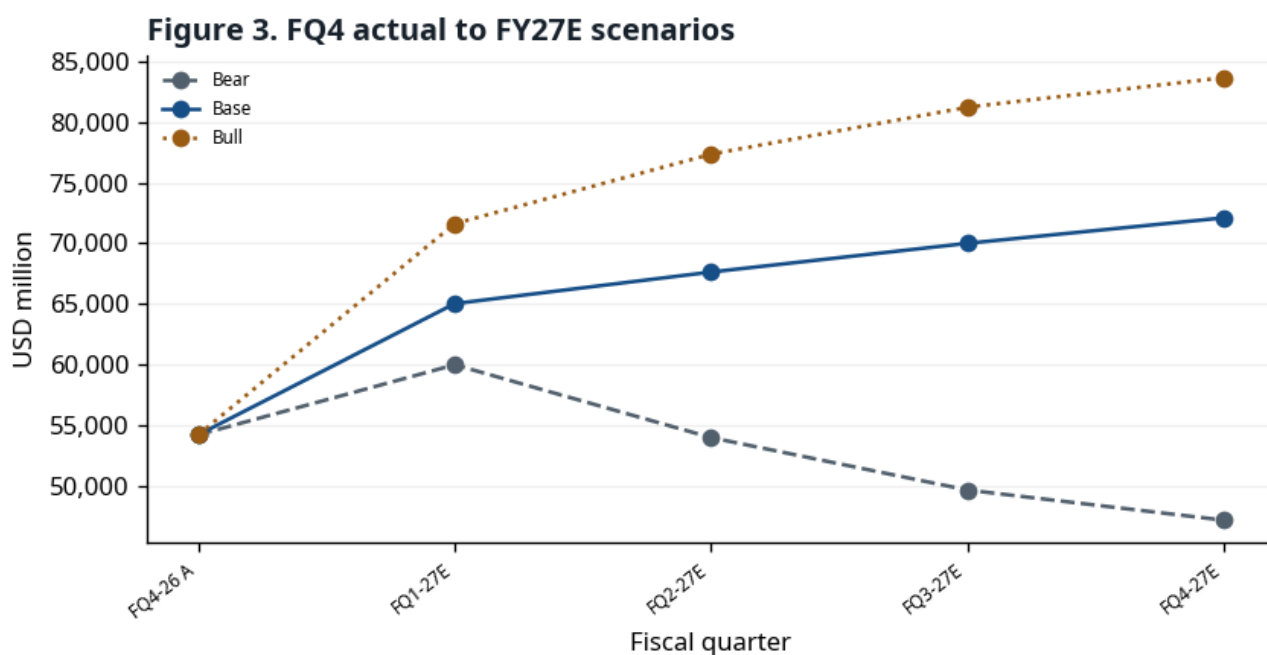

Figure 3. FQ4 actual to FY27E scenarios — USD million · Micron FQ4 results and RLE [SRC-EX991-FQ4FY26, SRC-RLE-FY27] · 2026-10-04 · GAAP actual (A-8K) + unweighted RLE paths

FQ1 FY27 company guidance

A dash in FY26E PREREG_A means the item was outside the pre-registered scope.

7. Margin bridge

The margin bridge separates changes in gross profit from changes in operating expense.

GAAP margin and operating-expense bridge

Interval	Metric	Start	End	Change / operating-margin contribution
FQ3→FQ4 FY26 actual	Gross margin		84.6%	86.8% +2.2%p
FQ3→FQ4 FY26 actual	Operating expenses (USD million)		1,738	3,296 1,558
FQ3→FQ4 FY26 actual	Operating expenses / revenue		4.2%	6.1% -1.9%p
FY26A→FY27E base	Gross margin		80.7%	86.0% +5.2%p
FY26A→FY27E base	Operating expenses (USD million)		8,164	10,353 2,189
FY26A→FY27E base	Operating expenses / revenue		6.1%	3.8% +2.4%p

The gross-margin change plus the contribution from a lower operating-expense ratio equals the operating-margin change. The expense-amount row separately shows the change in USD million.

8. Scenarios

This section keeps two layers apart: ① the FQ4 FY26 forecast frozen before the print (PREREG_A) and its scoring, and ② report-layer estimates (RLE) for FY27E–FY28E anchored on post-print guidance. ① was not altered; ② is not evidence of forecasting skill.

PREREG_A scoring: all 4 guidance-range labels hit, revenue and GAAP EPS fell inside the pre-registered bands, and the GAAP EPS error was \$0.30. The EPS hit came from revenue upside offsetting an opex overrun, and the FQ1 direction call (flat) missed (SCORED § 6, § 8).

RLE shows three paths side by side (bear, base, bull) with no probabilities or weighted average. Base FY27E revenue is \$274,784.14M and GAAP EPS \$169.05; bear and bull EPS are \$118.95 and \$199.52.

Assumption rules were set before the print (HANDOFF R9); after the print only three items changed: the base GM path (management called FQ1 the FY27 gross-margin floor), total opex (company guidance), and capex (replaced by guidance). The appendix lists each original rule, the change and the reason. One limitation: the rule hash was recorded after the print, so the only evidence of pre-registration is the conversation log.

Sensitivity rows show three alternative growth paths and the original GM rule next to the base. A 0/0/0% growth path is not neutral: with continued bit growth it implies falling prices.

9. Valuation

The valuation table shows its reference dates and calculation basis.

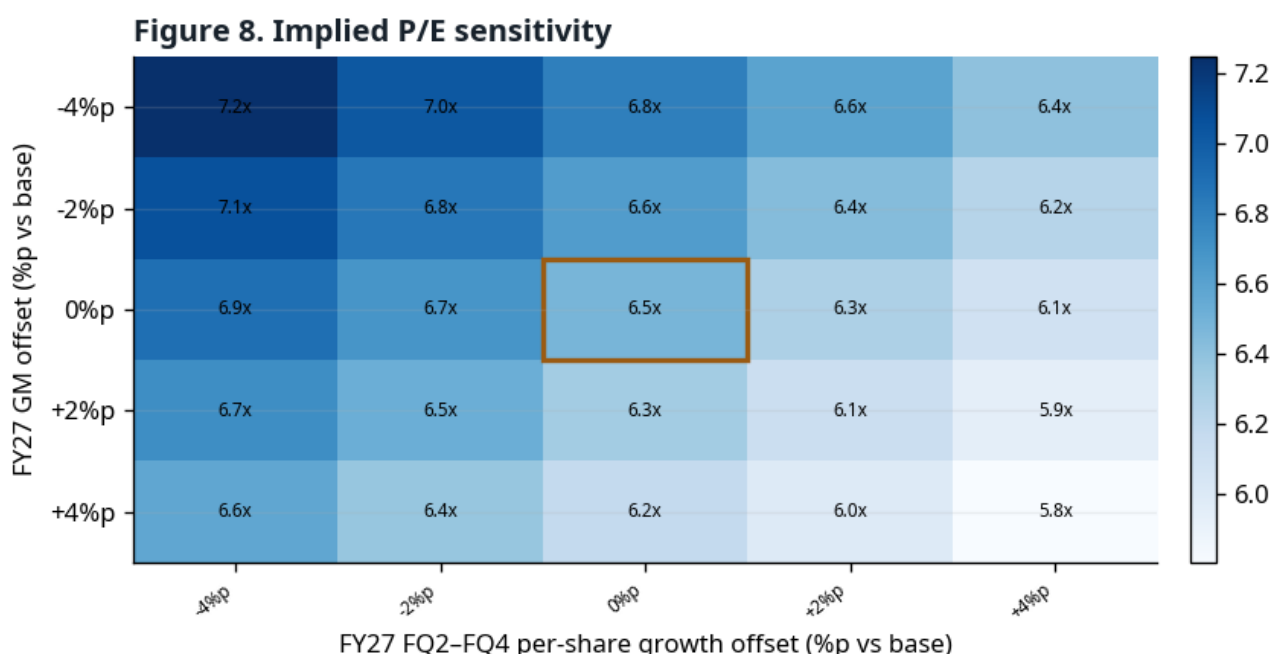

Figure 8. Implied P/E sensitivity — multiple; axes in %p · Reference price and RLE [SRC-PRICE-1] · 2026-10-04 · Center cell=base path; fixed reference price; recalculated GAAP EPS RLE

Reference-price implied multiples

Period and path	P/E	EV/EBITDA	EV/Sales	FCF yield

Price date 2026-10-01 · equity date 2026-09-03 · shares use FQ4 diluted weighted-average shares

10. Risks and swing factors

Price cycle

The key variable is when slower price increases turn into price declines. In past cycles, quarterly revenue fell by double digits right after the peak. The bear path tempers this tail but does not rule it out.

Source: REM p.9 · RLE A2, A3

One-offs above operating income

In FQ4, a patent license charge and other operating expense sat above operating income and pushed opex well above guidance. The pre-registered below-OP watch item (SF5) did not cover this, and FY27 incentive compensation can move through the same line.

Source: PR · SCORED § 4, § 7

Rising investment

Management guided FY27 net capex of about \$25B in the first half and higher in the second. RLE sets the second half equal to the first (a floor), so FCF may be overstated.

Source: REM p.10 · RLE A14

SCA structure

Price floors limit downside and ceilings limit upside. Customer deposits are financing cash flows and are returned late in each contract. Net cash in this report is not adjusted for deposits.

Source: REM p.3, p.8–9

Capital return and share count

Micron plans to increase capital return from 2026-12-09 and over time return 100% of excess cash. RLE includes no buybacks, so EPS upside from them is omitted.

Source: REM p.9 · RLE A7

FY28

Management expects supply to stay tight in 2028, while new cleanroom output builds from late 2028. FY28E is shown only as an unweighted stress range.

Source: REM p.2–3, p.5 · RLE A8–A10

11. Catalysts and schedule

When	What to check	Source
2026-10-14 / 10-29	Quarterly dividend record / payment date (\$0.15 per share)	PR
2026-10 (expected)	FY26 10-K filing — scoring moves from provisional to confirm; G0-A and G0-B close	SCORED
From 2026-12-09	Start of increased capital return	REM p.9
FQ1 FY27 earnings (date not announced)	Check revenue vs guidance and the GM-floor statement; first RLE comparison	REM p.9
Early CY2027	Initial output from Singapore HBM advanced packaging	REM p.3
Mid CY2027	Idaho ID1 wafer output; meaningful shipments from Tongluo, Taiwan	REM p.2–3
Second half of CY2027	Next-generation DRAM and NAND nodes begin volume production	REM p.2
Second half of CY2028	Output from ID2, the Japan DRAM expansion and the new Singapore NAND facility	REM p.2–3

12. Appendix

The appendix brings together the prior rules, post-print changes, interpretation correction and timing limitation.

The rules were set before the print, but the file and hash were recorded afterward. The conversation record is therefore the only evidence of pre-registration.

Post-print changes

Item	Original	Change	Reason	Source page
A3_base	FQ1 = M1; then -0.5 percentage point per quarter	FQ1 = M1; then flat through FQ4; retain -0.5 point path as preregistered sensitivity	Prepared remarks identify FQ1 as the FY2027 gross-margin floor and state that later quarters should be higher; flat is a conservative no-new-number implementation.	9
A4_opex	FY2026 GAAP opex * 52/53 + 1000; FQ1=X1; allocate the remainder 30:33:37	(6841 non-GAAP opex + 2500) + 253*4 = 10353; quarterly 2310/2413/2654/2976	Prepared remarks give an approximately 2500 FY2027 increase on the document's non-GAAP basis. The 253 quarterly GAAP add-on is the FQ1 stock-compensation difference: R&D 166 plus SG&A 87.	9
A14_net_capex	FQ4 actual net capex * 1.05, flat; replace if numerical FY2027 guidance is issued	11500/13500/12500/12500; FY2027 total 50000; FY2028 total 50000	Prepared remarks give FQ1 about 11500 and first-half about 25000, and say second-half capex will be higher. Setting second half equal to first half is a disclosed lower bound that biases FCF high.	10

Net-capex roll-forward interpretation correction

Use net capex in the PP&E roll-forward: $PPE_{end} = PPE_{begin} + net_capex - D\&A$; quarterly $D\&A = (d/4) * average(PPE_{begin}, PPE_{end})$.

The FY2025 10-K states that government incentives related to capital expenditures reduce property, plant and equipment.

The timing difference between receipt of incentives and the PP&E reduction, including the FY2026 noncurrent unearned government incentive balance of 786, is not modeled.

The working-capital change applies k to the annual change in revenue.

Method and information boundary

FY2026Q4 PREREG_A, A-8K, A-10K and FY2027E–FY2028E RLE are separate columns. FY27 consensus comparison is UNAVAILABLE.
